

A photograph of a polar bear and its cub walking across a field of white sea ice floes. The bear is on the right, facing left, with its cub following closely behind. The background consists of more ice floes and a bright, overexposed sky.

Science & Education Program

Arts & Crafts

Our historian Sandra guided you during our art corner sessions to easily draw your favourite arctic animal.

NASA Globe Cloud Observer

Together with our Environmental Scientist, Laura, you submitted 2 cloud observations to NASA using the GLOBE observer app.

[View our data](#) on the global map

iNaturalist

We submitted a total of 24 observations of plants, algae and animals using the citizen science app iNaturalist.

View our data submitted on [our iNaturalist project](#)

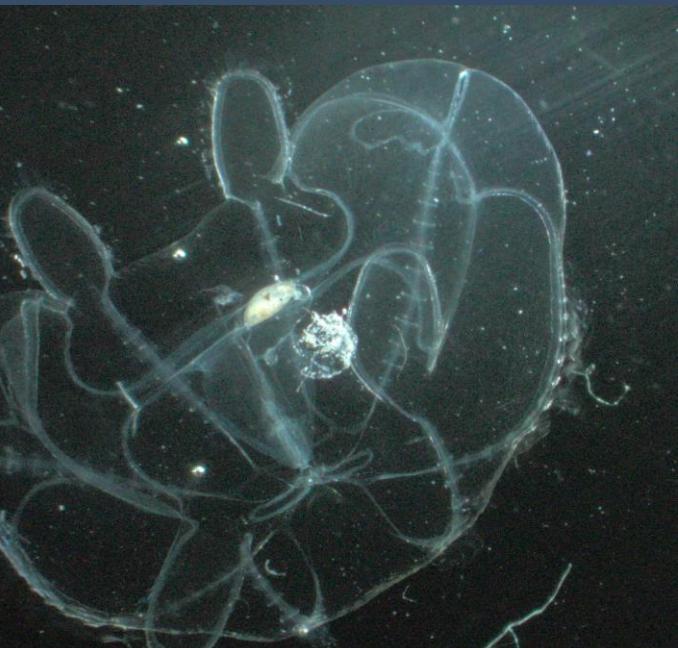

Science Boat

On our voyage, we conducted a total of 4 science boats in Magdalena fjord, Jotunkjeldene, Faksevågen and Alicehamna. We collected water samples to observe under the microscope, and measure secchi depths and several water parameters with the CTD (Conductivity/salinity, Temperature, Depth). In the sea ice, we also used the hydrophone to listen to the underwater world and recorded amazing singing of bearded seals.

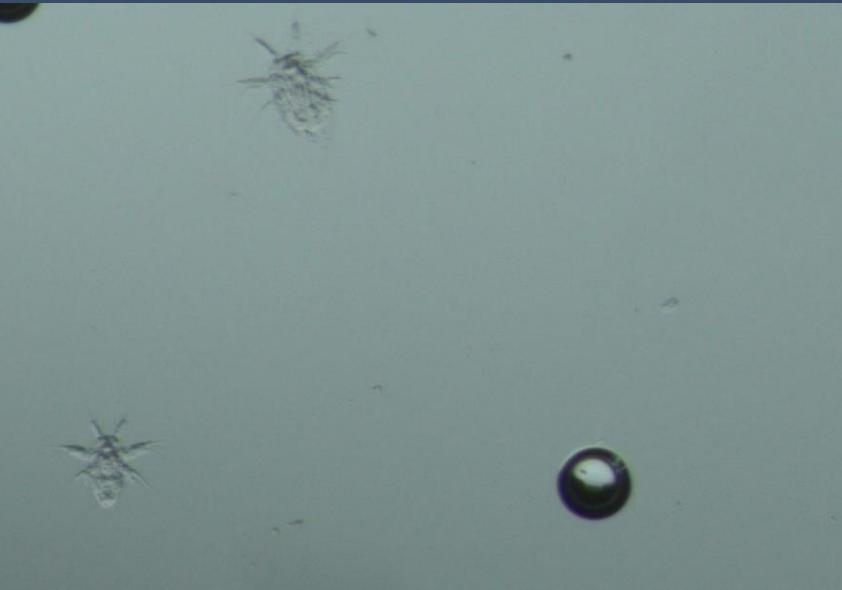

[View our data](#) submitted to the Secchi Disk Project.
Listen to our soundscapes in [Soundcloud](#).

First stage of sea cucumber.

Jelly fish

Larvae of a copepod.

Copepod.

Plankton Samples

Our water samples were very rich in copepods, either at larvae or adult stages. We also collected some jellyfish and few Blastula of Arctic sea cucumber.

The chlorophyll a content recorded by the CTD was very low indicating that the phytoplankton bloom is over and was eaten by the copepods.

Underwater Drone

We deployed our drone in Faksevågen close to the sea ice. We could discover under the ice a dense forest of seaweed.
